

“THANK YOU FOR GIVING ME BACK MY LIFE”

These are the grateful words of Rich Hull of Toms River after completing his treatment for a **ruptured disc** using the DRX 9000. While lying in a hospital bed with excruciating low back pain only a few months earlier, Hull experienced an amazing turn of events that resulted in the non-surgical treatment alternative that turned his life around. “I didn’t want surgery, so I did some research on the internet and found Dr. Zammito who had a DRX 9000 machine”. What Hull found was not only the answer to his chronic low back pain, but an amazing post-treatment MRI revealed that the ruptured disc “unruptured” and actually repaired itself. Dr. Kenneth Zammito who heads the Jersey Shore Low Back Center explains: “It’s hard to imagine and to clinically explain how a ruptured/extruded disc can be reduced to a bulge – But the MRI clearly shows it and the fact that Rich is virtually pain free is more evidence..I’m very happy and excited for Rich.”

Normally a ruptured disc requires surgery. But due to the advanced technology of DRX 9000 non-surgical decompression, even the most advanced, difficult cases can usually be helped. “Most of the patients we see have very difficult, debilitating low back conditions that could not be helped by conventional pain management,” Zammito added. “We’ve seen some pretty amazing things over the last 6 years of using this procedure, but the most satisfying thing is to see most of these patients stay out of pain years later...our first 2 patients we saw in 2003 are virtually still pain free to this day.”

Jersey Shore Low Back Center was the first clinic in Ocean County to introduce non-surgical spinal decompression using the DRX 9000 technology in 2003. The DRX 9000 was developed by scientists, doctors and engineers and marketed by Axiom Worldwide, a Tampa-based company that focuses on new medical technology. The machine relieves pain associated with herniated, bulging or protruded discs, degenerative disc disease, posterior facet syndrome, stenosis and sciatica. It achieves these affects through decompression of the intervertebral disc and posterior joints which unloads the weight and allows the reverse flow of nutrients and disc material back into the disc as well as increasing the size of the joint and nerve opening.

Dr. Kenneth Zammito heads the Jersey Shore Low Back Center in Forked River. The phone number is **(609)693-2020** for any back issues and pain evaluation to see if you qualify for this procedure.

A free special report has also been made available detailing everything concerning non-surgical decompression (24 hour recorded message) by calling **(800) 659-3282** or visit the website at :
